

Solar Solutions Torino 2025 brings innovation to northern Italy

Italy's renewable energy sector is undergoing unprecedented growth, reflecting the country's ambitious push toward a more sustainable future. This October, Solar Solutions will hold its first Italian edition at Lingotto Fiere in Torino, on October 1-2, 2025. The exhibition will showcase the latest advancements in Solar, EV Charging, Smart Storage and Green HVAC offering a platform for professionals to connect, learn, and prepare for the future of energy.

As one of Europe's fastest-growing solar markets, Italy presents a unique opportunity for companies aiming to establish or expand their presence in the renewable energy sector. In 2023 alone, Italy added 5 GW of solar capacity—doubling the growth seen in the previous year—and is now aiming for a total installed capacity of 79 GW by 2030. This growth highlights the enormous potential for innovation and investment, particularly in northern Italy, a region with significant economic and industrial influence.

Expert knowledge and groundbreaking technologies

Solar Solutions Torino will host seminars led by independent experts addressing critical topics such as innovations in solar energy, the integration of hybrid heat pumps, and the future of energy storage and EV infrastructure. These sessions provide visitors with cutting-edge insights into the technologies shaping the renewable energy sector.

A highlight of the exhibition will be the Innovation Boulevard, showcasing cutting-edge products and solutions that push the boundaries of sustainable energy. Exhibitors will present new technologies designed to tackle emerging challenges, offering practical and visionary approaches to energy generation, storage, and consumption.

The exhibition also provides invaluable networking opportunities, bringing together a wide range of industry professionals, including installers, developers, consultants, and suppliers, to foster meaningful connections and collaborations.

A local approach with global perspectives

Northwest Italy is a driving force in the nation's renewable energy movement, with its economic and industrial strength aligning closely with the exhibition's focus. Solar Solutions Torino will reflect this regional vitality while integrating a global perspective, as part of an established European network of renewable energy exhibitions.

The exhibition will bring together experts, innovators, and decision-makers to shape the future of renewable energy in Italy and beyond. Visitors will explore how Solar, EV Charging, Smart Storage and Green HVAC can be integrated to create holistic, sustainable systems. Discussions will extend beyond technology to address strategies for surplus solar energy, increasing self-consumption, and building solutions that benefit entire communities.

Further details about the program, exhibitors, and speakers will be available on our webpage soon, offering a comprehensive overview of the exhibition's scope and opportunities.

Exhibitor participation now open

Potential exhibitors are invited to join this landmark exhibition and capitalize on Italy's growing demand for renewable energy solutions. Participating in Solar Solutions Torino provides unparalleled access to a market that is not only expanding but increasingly central to Europe's broader sustainability goals. Exhibitors will have the chance to connect directly with key stakeholders and demonstrate their expertise to a highly targeted audience. Companies interested in showcasing their solutions can contact the organizers now to secure their place and benefit from this opportunity to expand into northern Italy's high-potential market.

Exhibition details

Solar Solutions Torino

- October 1-2, 2025
each day from 10:00 a.m. to 5:00 p.m.
- Lingotto Fiere, Padiglione 3
Via Nizza 294, Torino, Italy.

Further details about ticket sales, exhibitors, and the program will be announced soon at www.solarsolutionstorino.it.
