

PRESS RELEASE - May 2025

Preparations in full swing for Solar Solutions Torino 2025 Innovation, Training, and Dialogue at the Heart of the Energy Transition

Turin, May 2025 - Preparations are well underway for **Solar Solutions Torino**, the B2B trade fair dedicated to energy efficiency, taking place **on October 1- 2, 2025** at **Lingotto Fiere - Hall 3**. The first Italian edition promises to deliver a rich program featuring cutting-edge technologies, and meaningful opportunities for dialogue between companies, industry professionals, and institutions.

Four key themes will shape the platform: **Photovoltaics, Smart Storage, EV Charging, and Green Heating**.

In addition to a large exhibition area tailored to the Italian market - with a special focus on **installers** and end-use technologies, Solar Solutions Torino will feature technical and educational content, offering a concrete up-to-date overview of the sector's ongoing evolution.

Innovation Boulevard

One of the highlights will be the Innovation Boulevard – a dedicated exhibition pathway showcasing the most innovative products on the market. Exhibitors will have the opportunity to present their most advanced solutions, contributing to the future of solar energy in Italy and beyond.

Seminars: Training and Professional Development

The seminar program, organized in collaboration with **Infoweb** and **Prospecta Formazione**, will provide in-depth insights into technical, regulatory and design topics. It represents a valuable training opportunity for **professional installers** and **technicians**: in particular, industrial experts and architects will be able to earn **continuing education credits** by attending the sessions.

The Panel on Energy Transition - Sponsored by Kyoto Club

Among the most anticipated events is the "**Panel on Solar Policies and Development in Piedmont**", organized by **Kyoto Club** and moderated by **Beppe Gamba**, Coordinator of the Kyoto Protocol and Local Authorities Working Group. The panel will offer a key moment of discussion on regional strategies to accelerate the ecological transition and will feature the participation of:

Elisa Guiot, Director of Sustainable Energy Development Sector - Piedmont Region

Silvia Bodoardo, Polytechnic University of Turin - Department of Applied Science and Technology

Agostino Re Rebaudengo, President Asja Ambiente

Mario Gamberale, CEO Exalto Energy & Innovation

Davide Damosso, Envi Park Director.

As Beppe Gamba points out:

"The energy transition is already underway. It affects everyone and involves the daily choices of households, businesses, consumers and institutions. We have many of the technologies we need. The real challenge is to foster an environment that supports innovation and cooperation between public decision makers and investors - so that the transition is not only rapid, but also just."

It is precisely in this direction that Solar Solutions Torino looks: a concrete opportunity to connect skills, solutions and visions. The goal is to provide industry professionals with a space for **technical updates**, **networking** and **business development**, with a strong focus on the local context and the dialogue between companies and professionals.

The technologies are already available – what we now need is **vision**, **commitment**, and **collaboration**.

Solar Solutions Torino aims to be the platform where ideas turn into action, offering concrete solutions to the challenges of the energy transition. It's an opportunity to foster meaningful connections between supply and demand.

Companies interested in **participating as exhibitors** can still register – now is the perfect time to contribute to the development of the sustainable solutions the industry needs.
